Math 241 Sample Problems for Final Exam

Question 1 Show that the following limit does not exist as $(x, y) \to (0, 0)$ by considering different paths of approach.

$$\lim_{(x,y)\to(0,0)} \frac{x^2y+y^2}{x^4+y^2}$$

Question 2 Let $f(x,y) = \frac{\sin(2x-y)}{y}$. Find the equation of the tangent plane to the surface f(x,y) at the point when (x,y) = (2,1).

Question 3 Let z = g(x, y) and suppose that $x(t) = t^2 + 3t + 2$ and $y(t) = e^t + \sin(3t)$. Find $\frac{dz}{dt}\Big|_{t=0}$ if

$$\left.\frac{\partial g}{\partial x}\right|_{(1,2)}=6, \left.\frac{\partial g}{\partial y}\right|_{(1,2)}=-2, \left.\frac{\partial g}{\partial x}\right|_{(2,1)}=-3, \left.\frac{\partial g}{\partial y}\right|_{(2,1)}=8, \left.\frac{\partial g}{\partial x}\right|_{(0,0)}=0, \left.\frac{\partial g}{\partial y}\right|_{(0,0)}=-4$$

Question 4 Let the temperature at a point (x,y) be given by $T(x,y) = \frac{xy}{(1+x^2+2y^2)}$.

- a) Find the direction in which the temperature rises most rapidly at (1,2).
- b) Find the directional derivative of T at the point (1,2) in the direction of the vector $\mathbf{v} = 5\mathbf{i} \mathbf{j}$.

Question 5 Let $f(x,y) = 3x^2y + y^3 - 3x^2 - 3y^2 + 2$.

- a) Find the critical points of f(x, y).
- b) Classify the critical points in part a) as a relative maximum, relative minimum or saddle point.

Question 6 Lagrange multipliers?

Question 7 Find the volume of the solid wedge cut from the cylinder $4x^2 + y^2 = 16$ below by the plane z = 0 and above by the plane z = y by evaluating an appropriate double integral.

Question 8 Evaluate the double integral $\int_0^{\sqrt{2}} \int_y^{\sqrt{4-y^2}} \frac{1}{(1+x^2+y^2)^{3/2}} dx dy$, by using polar coordinates.

Question 9 Express the triple integral: $\iiint_R \frac{1}{x^2 + y^2 + z^2} \, dy \, dz \, dx \text{ as an integral in spherical coordinates}$ if R is the region bounded below by the paraboloid $2z = x^2 + y^2$, and above by the sphere $x^2 + y^2 + z^2 = 8$. This is a little tricky since you will need to use two triple integrals. Do NOT Evaluate the integrals!

Question 10 Let $\mathbf{F}(x,y) = (e^x \sin y - y)\mathbf{i} + (e^x \cos y - x - 2)\mathbf{j}$ be a vector field defined on \mathbb{R}^2 .

- a) Show that \mathbf{F} is a conservative vector field.
- b) Evaluate the line integral $\int_C \mathbf{F} \cdot d\mathbf{r}$, where C is the path $\mathbf{r}(t) = (\ln(t+1)\cos(\sqrt{\pi}\ t))\mathbf{i} + (t^2 + \frac{1}{2}\pi)\mathbf{j}$, $0 \le t \le \frac{\sqrt{\pi}}{2}$.

Question 11 Evaluate the line integral $\int_C (x+xy^2) dx + 2(x^2y-y^2\sin y) dy$ where C is the path oriented counterclockwise enclosing the region in the first quadrant bounded by $y=x^2$ and y=1 and x=0 by using Green's Theorem.

Question 12 Use the transformation $x=u^{2/3}v^{1/3},\ y=u^{1/3}v^{2/3}$ to find $\iint_R \frac{x^2\sin xy}{y}\,dA$ where R is the quadrangular region bounded by the parabolas $x^2=\frac{1}{2}\pi y,\ x^2=\pi y,\ y^2=\frac{1}{2}x,\ y^2=x.$ You may assume that u,v>0.

Question 13 Compute $\int_C \mathbf{F} \cdot \mathbf{T} \, ds$ and $\int_C \mathbf{F} \cdot \mathbf{n} \, ds$ for the vector field $\mathbf{F}(x,y) = (x+y)\mathbf{i} - (x^2+y^2)\mathbf{j}$ where C is the boundary of the triangle bounded by $y=0, \ x=1$ and y=x oriented counterclockwise.
